

Unfortunately, there is no software available that can make the process of organising district league fixtures significantly easier. There are just so many variables with the number of courts that clubs have and the number of teams they enter, that software hasn't been developed yet that can effectively assimilate all this. The LTA's League Planner software is a good package and is used by the majority of district leagues in Yorkshire, but it does have limitations in terms of scheduling, so is unlikely to meet all requirements. Please get in touch with us for further assistance if needed.
